Inbound Health

Inbound InHome℠

Patient management and analytics platform for acute and post-acute in-home care, designed for providers and patients.

Inbound InHome℠ offers a facility level care experience at home. Utilizing technology and machine learning to identify suitable patients, the platform reduces the patient eligibilty process by 50% compared to manual methods. Inbound InHome connects with EMRs, streamlines logistics with a workflow application and integrates monitoring devices for comprehensive patient oversight in real time. For patients receiving at-home care, the platform is accessible on tablet devices, facilitates remote communication with providers, and offers easy access to appointments and personalized care plans.

In-Home Hardware

- Cell-enabled tablet and peripherals
- Pre-installed engagement app
- In-market logistics associates

AI Analytics

- Patient identification
- Care planning
- Risk identification

Engagement Apps
